

Njeze Peter Nnabuike

BACKEND DEVELOPER — NODE.JS · NESTJS · TYPESCRIPT

nnabuikenjeze@gmail.com · +234 902 962 7814

Lagos, Nigeria · Remote · WAT (UTC+1)

[socialmarkethq.com](#) · [portfolio](#) · [github.com/XDENTERTAINMENT](#)

Backend-focused developer who builds production Node.js services in TypeScript. Designed and shipped a live 172-endpoint NestJS API for a social commerce marketplace — third-party integrations, queue-driven background processing, geospatial search, JWT auth and Redis caching — owning it end to end from schema design through deployment and production debugging. Comfortable working independently and remotely, and quick to pick up new stacks.

TECHNICAL SKILLS

Backend	Node.js · NestJS · Express.js · TypeScript · REST API design · Socket.IO / WebSockets · JWT auth & RBAC · rate limiting & throttling · modular architecture
Data	MongoDB & Mongoose · MongoDB Atlas · compound & 2dsphere geospatial indexing · query optimization & pagination · Redis caching · Prisma ORM · SQL / PostgreSQL (working knowledge)
Infra & DevOps	BullMQ background jobs & queues · Bull Board · PM2 · Render · Git / GitHub · health monitoring & graceful shutdown · Playwright (visual + a11y) · Postman
Integrations	Cloudinary · Mapbox · Resend · third-party API integration with retries, rate limits and failure handling
Frontend	React · Next.js · JavaScript (ES6+) · HTML5 / CSS3 · Axios

EXPERIENCE

SocialMarketHQ — Full-Stack Developer (Backend-focused)

Jun 2026 – Present · Remote

Social commerce platform — marketplace, virtual shops, barter, geolocated discovery and real-time messaging. Live in production.

- Architected a modular **NestJS + TypeScript** backend — 38 feature modules exposing 172 REST endpoints across listings, shops, orders, buy requests, barter, feed and messaging.
- Designed the data layer over 33 MongoDB collections with compound and 2dsphere geospatial indexes, lean queries, cursor pagination, denormalized counters and batched lookups to keep feed and search fast as data grows.
- Built 11 **BullMQ + Redis** queues for media processing, transactional email, notifications, moderation, analytics and scheduled maintenance, monitored with Bull Board and safe under graceful shutdown.
- Integrated third-party APIs end to end — **Cloudinary** (media pipeline, transformations, CDN), **Mapbox** (geocoding, autocomplete, nearby discovery) and **Resend** (OTP and transactional email) — with retries, rate limiting and failure handling.
- Implemented authentication and security across REST and 2 Socket.IO gateways: JWT issuance and verification, role-based authorization, OTP email verification, Redis-backed rate limiting, request throttling, input validation and security headers.
- Engineered a SHA-256 content-addressed media deduplication engine with automatic garbage collection, removing duplicate uploads and cutting storage cost.
- Shipped the admin platform backend — user and shop management, listing moderation, reports and appeals, CMS and legal documents — and owned deployment on Render with PM2, health checks and 23 Playwright visual/accessibility specs.

SELECTED PROJECT

Smart Exam Platform

- Built a full-stack online examination system on Node.js, Express and MongoDB for creating, scheduling and taking exams.
- Developed the REST API and schema design, and integrated a responsive React frontend against it with Axios.

EDUCATION

B.Sc. Computer Science — Enugu State University of Science and Technology (ESUT)
